### Audit Access Expires Jul 20, 2020

You lose all access to this course, including your progress, on Jul 20, 2020.

Upgrade by May 18, 2020 to get unlimited access to the course as long as it exists on the site. [Upgrade now](#)

## CC 1.1.2: Objects

In these Comprehension Checks, we will review a range of Python topics, and do not expect you to know the answer without any aids. As you answer these questions, feel free to use Python and the internet interactively to get the right answer!

### Objects: Question 1

0/1 point (graded)

Python has immutable objects (e.g., strings and tuples) and mutable objects (e.g., dictionaries and lists). What does it mean for an object to be immutable?

- ☒ It cannot be indexed using bracket notation (e.g., `"abcdef"[1]` returns an error).
- ☐ Its contents cannot be modified by the programmer after the object has been created.
- ☐ It cannot be deleted after creation.
